Epimed announces the expansion of their Texas office to the city of Farmers Branch

Irving, TX – September 22, 2011

Medical device manufacturer Epimed International is expanding their Irving operation to the city of Farmers Branch, TX.

Epimed has acquired a 23,000-square-foot facility which will accommodate the company's further expansions. The New York facility will continue its role in manufacturing Epimed's line of pain management products.

“We are excited to begin a new chapter in the city of Farmers Branch. As a small business navigating in a difficult economy, Epimed has identified Farmers Branch as a unique environment for growth,” says Epimed Executive Vice President Sandor Racz. “Assisted by this transition, we anticipate that Epimed's focus on quality, safety, and cost-effective interventional pain management products will yield sustainable growth in our direct market despite the challenging environment of medical manufacturing.”

Sandor Racz additionally states, “Beginning with the invention of the spring wound catheter, Epimed has developed its pain management line of products into a highly efficient manufacturing operation. We pride ourselves in the manufacture, distribution, and export of our complete line of products from our US facilities. We have used our expanding production expertise as a launch pad in offering innovative high quality, ISO certified products to a host of medical industry partners. Our outlook is that U.S.– manufactured products will experience significant growth if—and hopefully when—the economy rebounds. Texas, and specifically Farmers Branch, offers us a great climate for our projected growth.”

Epimed International is a leading medical device manufacturer of pain management products and a global-wide resource of OEM manufacturing for small scale operations to several high profile corporations.
